ABSTRACT

Cerner Corporation is a leading supplier of health information technology solutions, services and devices. Cerner solutions support the clients by surfacing data that enables them to make informed decisions for better management of operations, while providing clinicians with the information they need to provide smarter care. Smarter solutions transform the way healthcare is provided and allow physicians and healthcare providers to focus on what truly matters.

With increasingly extensive use of technology, moving services to the cloud is the next step forward in Cerner's path. Cloud services offer better reliability, integration and security and saves the headache of maintaining the infrastructure. As part of migrating Cerner services to the cloud, this application is being developed to support web services for retrieving letter templates. The application provides REST services for querying from a database to retrieve letter templates based on the input filters. This service will be hosted on the cloud which can then be accessed from a client application.
