## Abstract

We report the case of a 72-year-old woman who was presented to us with a right pre- and infra-auricular and neck swelling. On evaluation, she was diagnosed to have parotid malignancy with cervical lymph node metastasis. The mass was surgically excised, and a histopathological report of sebaceous carcinoma was obtained. She had a past history of right eye malignancy. A review of literature on sebaceous carcinoma was carried out. This article is about a rare tumour at an atypical site.

**Key words:** Carcinoma, Parotid, Sebaceous
