#### ABSTRACT

With an increase in hiring of resources in firms, as per demand of the managers, there needs to exist a system that maintains efficient communication between the acquisition team and the managers to keep the manager notified of the status of the resources, so that manager could plan the activities or demand urgent actions as per his/her need. Also there is a need to maintain automatic cost management in order to reduce human efforts and errors. These issues are taken care in this project, Manifold Cost and Process Automation.

A mailing system has been designed under this project in order to automate the notifications to the managers as well as a cost system application has been designed to overcome these issues with the help of Salesforce, which allows its cloud based platform for developing and administering both the mailing system and cost management application.

With the help of mailing system, the process of notification to managers was executed on a weekly basis with success, while the cost management application, powered by an approval system helped to save a lot time in multiple phases of calculation and updating.
